

VIDO-InterVac Community Liaison Public Meeting

Tuesday, October 14, 2014

7:00 PM

McNally Robinson Bookstore

REFRESHMENTS TO FOLLOW

You are invited to a public meeting sponsored by the VIDO-InterVac Community Liaison Committee. InterVac is a bio-containment Level 3 (CL3) facility where scientists study certain diseases and develop and test vaccines. The term CL3 describes the type of safety measures and equipment needed within the facility to ensure the safety of workers and the community.

The Community Liaison Committee, chaired by Susan Lamb, is a diverse group of citizens including experts in emergency measures as well as citizens at large. The CLC is an independent committee established by the University of Saskatchewan to ensure communication on safety issues related to InterVac is open and transparent. The CLC continuously seeks information on activities of community concern, as well as monitors issues related to safety and any incidents of potential public interest. This is especially timely as operations have recently begun.

Dr. Andrew Potter, CEO and Director of VIDO-InterVac, and some of his senior staff will make a presentation with questions and refreshments to follow.
